

## **Full-Stack Developer trainee**

Threenitas S.A. is a software engineering company based in Athens.

At Threenitas we work directly with our clients to plan, design, and implement digital products & solutions.

Our strength lies in our ability to apply what we know and our eagerness to learn what we haven't yet practiced. We love technology, gadgets and services, and we rejoice in putting them to the best of use for our client's projects. We build on top of our deep knowledge of digital media and our solid engineering background, to realize our clients' vision and meet their practical goals.

### The Environment

All members of our team are professionals passionate with technology, who love exploring new products and services in order to stay on the cutting edge.

Any new team member should be interested in technology and demonstrate a keen interest in applying such technology as a means for improving people's everyday lives. They will be encouraged to expand on ideas, play around with new technologies, develop themselves as professionals and develop fun applications that will be used by many.

### Why interns

We are looking for talented students who aspire to learn and improve, show a strong desire to explore the digital world, and want to leave their mark while working on real-world problems.

Yet we do not limit the scope of our search only to internships. We invest in our people's improvement, and we offer access to structured training and seminars, while keeping everyone interested with challenges on projects that reach thousands of users. Any successful intern showing promise and desire for further development, will be offered a contract for full or part time employment, regardless of any future military service obligations. Our team operates in a flexible manner, and consists of members working either on premise or remotely, so we are open to both options.

If you want to experience a modern company culture, while working with successful professionals who understand your needs and worries, having previously walked in your shoes, do not hesitate to send us your CV.

Successful candidates will join our Backend engineering team. The team delivers interesting and often complex projects, such as content-management platforms, Web apps and Web API's supporting mobile apps and cloud-based solutions. Our software solutions are built on top of the Microsoft ASP.NET technology stack (C#, MVC), Angular or PHP (Laravel MVC), but we are always looking for new exciting tools and technologies.

## **We know that you will be a good fit for our team, if...**

- You have familiarity with Object-Oriented languages and university-level programming skills
- You have familiarity with databases and SQL
- You have experimented with any backend development language (.NET, Java, PHP, Node, Ruby etc) or any JS Framework (Angular, React etc)
- You simply enjoy coding, regardless of the programming language
- You have a special attention to detail and want to understand how technologies work and not just how they are used.
- You have a problem solver mentality and understand that coding is a skill that requires practice to acquire.
- You have been working with AI & Machine Learning Algorithms
- Undergraduate studies in Computer Science, Engineering, Mathematics, Physics or relevant field

## Recruitment at Threenitas follows a 4-step selection procedure!

Phone screen from the company's human resources team

If you receive a positive response, you will be interviewed by the head of the department

If you are interested in internships related to the development and business analysis, you will receive after the interview an assessment test.

Final Decision & Offer

The whole recruitment process will be done virtually.

If you have any question, you can send an email to **[internships@threenitas.com](mailto:internships@threenitas.com)**

Based on the company's policy on equality and non-discrimination, you need to avoid adding a photo, age and marital status to your CV or cover letter.
